

I do NOT support the Low Power FM changes to take priority over the current FM translator service currently in place. I currently listen to K-LOVE radio based out of Rocklin, California. This radio station has encouraged me and help me to talk about my views on family and religion to other friends and family members. Lets face it, there is a lot of junk on the radio that does NOT need to be on the air or promotes negative actions and immoral ways of life. If anything we need to keep positive and clean stations on the air. That is why I give a \$50.00/month donation to K-LOVE radio. I am willing to pay for the radio I listen to instead of settling on the stations that are available without my donation. If K-LOVE were to go off the air in my area then I would be forced to turn off the radio or listen to my radio station only through the internet. There are hundreds of K-LOVE financial supports in my area that freely give money to keep K-LOVE in our area. Yes, we realize that it is NOT a local station and we know that we are sending our money out of our local area. We choose to do this because we demand a more positive radio station in our area. We are willing to put our money where our mouth is and we want better programming when it comes to radio broadcasts. If our local area is unable to assist us with we need then we are willing to get this programming from other places. A short example of how K-LOVE effects my area: About a year ago my brother joined a local "garage" band and he started to listen to hard rock-n-roll. But since my brother has been exposed to K-LOVE, he is now listening to music that is a bit lighter and is more positive. The other day I caught my brother listening to K-LOVE and even singing to it. I want to keep K-LOVE in my local area and I am willing to financially help support the station who brings this type of programming into my area. Please take into consideration the struggles that it would cause us, being without many options in such a rural area of Kansas. Thank You for reading this comment.
